

Getting high: scope, projection, and evaluation order¹

Patrick D. Elliott² & Martin Hackl³

February 6, 2020

¹ 24.979: Topics in semantics

² pdell@mit.edu

³ hackl@mit.edu

“The seminar will provide a venue for discussing various mechanisms for scope-taking and projection, taking as our starting point continuations – a perspective on scope-taking developed by Chris Barker and Chung-chieh Shan. We will attempt to develop a solid working knowledge of the relevant mechanics, as well as arrive at a comprehensive empirical assessment of their advantages and drawbacks in selected areas of application. These will include quantifier scope, variable binding, cross-over, and presupposition projection, paying particular attention to linearity effects which continuations are designed to handle in a principled manner.”

1 Tentative schedule

Thursdays 14:00-17:00, 32-D461

The first few weeks are fairly stable, but later weeks will probably shift.⁴

⁴ Note, Patrick is down as teaching *crossover* *i*, but will be at a conference that week, so this session will need to be rescheduled. We'll be in touch about that soon.

date	content	lecturer
today	continuations i	Patrick
02.13	continuations ii	Patrick
02.20	the view from QR i	Martin
02.27	the view from QR ii	Martin
03.05	crossover i (Shan & Barker 2006)	Patrick
03.12	crossover ii (Chierchia, to appear)	Martin
03.19	presupposition as scope (Grove 2019)	Patrick
04.02	Haddock's puzzle (Bumford 2017)	Martin
04.09	TBA	Patrick
04.16	presupposition and reference resolution	Martin
04.23	TBA	TBA
04.30	<i>student presentations</i>	N/A
05.07	<i>student presentations</i>	N/A

2 *Requirements*

2.1 *General*

Students should attend and participate (obviously!). There will also be occasional homework assignments, consisting of either (i) a p-set, or (ii) submitting questions on an assigned reading. These will usually be due back the day before the following class.

2.2 *Student presentations*

For the registered students, we expect two things:

- A presentation in class.
- Eventually, a term paper.

We've blocked out the final two weeks of the seminar for student presentations, but this is mutable. The presentation may take one of two forms: (a) leading discussion of a paper relevant to the term paper topic,⁵ (b) presentation of WiP ideas that will eventually take the form of a term paper. Just to emphasise, we don't expect the latter kind of presentation to be especially polished or complete. Something more exploratory is fine. Given that there are four registered students, each presentation should be around one hour long.

⁵ If you decide on this option, it may be desirable for you to present earlier in the semester, especially if the paper you'd like to discuss overlaps significantly with a topic we plan to discuss. If you'd be interested in doing this, please let us know.

Leading up to the presentations, we'll be in touch with registered students to arrange semi-regular meetings.

3 *Readings*

The beginnings of a bibliography for this seminar:⁶

⁶ Note: readings aren't necessary until assigned. If you have any suggestions for papers on related topics we should look at, please let us know! You can shape the future of the seminar!!

3.1 *Scope*

- Chris Barker. 2002. Continuations and the Nature of Quantification. *Natural Language Semantics* 10(3). 211–242
